B.Tech in CSE (Core):

2025 to 2029

CSE0001 – Digital Literacy

28th March 2026

Introduction:

This Digital Literacy Portfolio was created as part of my role as a Student Digital Ambassador. The project aims to develop essential skills required to navigate the digital world responsibly and effectively. It focuses on building awareness about online identity, safe internet practices, professional communication, and cyber safety

Through five structured tasks, I explored key aspects of digital literacy, including creating an infographic, setting up professional online profiles, using learning and collaboration platforms, practising email etiquette, and understanding cybercrime risks. Each task combines practical application with reflection to demonstrate both technical and responsible use of digital tools.

This portfolio not only showcases my learning but also serves as a resource to guide my peers in becoming more aware, skilled, and responsible digital citizens.

Task 1 Write up:

For Task 1, I created a one-page infographic using Canva to explain the concept of digital literacy in a simple and visually engaging way. I chose Canva because it offers user-friendly tools, modern templates, and a wide range of icons that helped me design a clean and structured layout without needing advanced design skills.

My infographic, titled “Digital Literacy for Students,” covers four key areas: understanding digital literacy, useful digital tools, safe internet practices, and maintaining a professional online presence. I organized the content into clearly separated sections with headings and bullet points, making it easy to read and visually appealing. I also used a consistent color theme and spacing to give the design a neat and professional look.

One interesting aspect of this task was learning how to present important information in a concise format while still making it visually attractive. The main challenge I faced was balancing content and design—ensuring the slide was not too crowded while still including all essential points. Overall, this task improved my awareness of digital literacy and enhanced my design skills.

Task 2 Write up:

For Task 2, I created and updated my professional profiles on GitHub, LinkedIn, and Stack Overflow to build a strong digital presence. GitHub is a platform used to showcase projects and manage code repositories, which will help me document my academic work and technical progress. LinkedIn is a professional networking platform where I can present my educational background, connect with peers and professionals, and explore internship opportunities. Stack Overflow is a community-driven platform where developers ask and answer technical questions, helping in problem-solving and knowledge sharing.

While setting up GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I completed my Education section with my current degree and expected graduation year. On Stack Overflow, I set up a profile to engage with technical discussions.

Over the next four years, I plan to actively use these platforms to upload projects, enhance my skills, participate in discussions, and build a strong professional identity that will support my academic and career growth.

Task 3 Write up:

For Task 3, I explored both a coding practice platform and a cloud collaboration tool to enhance my digital skills. For coding practice, I used HackerRank, where I completed beginner-level Python challenges and earned a beginner badge. These exercises helped me improve my understanding of basic programming concepts and problem-solving skills.

For collaboration, I created a Google Form titled "Digital Literacy Awareness Quiz" consisting of five questions, including multiple choice and short answer types. I also linked the form to a Google Sheet to collect and analyze responses efficiently.

This task helped me understand how coding platforms can be used to practise and strengthen technical skills, while tools like Google Forms and Sheets are useful for collecting data and collaborating in academic environments. In the future, I plan to continue using HackerRank to improve my programming skills and use Google Workspace tools for group projects, surveys, and data organization throughout my academic journey.

Task 4 Write up:

In today's digital world, poor communication can lead to serious misunderstandings. For example, a student sending an email to a professor without a proper subject line, greeting, or respectful tone may come across as rude or careless. This can negatively affect the student's relationship with the professor and reduce the chances of receiving a positive response.

In another scenario, sending unclear or incomplete messages in professional settings, such as internship inquiries, may lead to missed opportunities. Lack of clarity and professionalism can create a poor impression.

Such situations can be avoided by following basic email etiquette, including using a clear subject line, maintaining a polite tone, structuring the message properly, and proofreading before sending. Effective digital communication is essential for building professional relationships and ensuring clear understanding.

Task 5 Write up:

While working on this task, I was surprised by how easily people can be tricked into sharing sensitive information during UPI fraud scams. The use of urgency and impersonation by attackers makes these scams very convincing, especially for students who frequently use digital payment platforms.

I realized that many users are unaware that entering a UPI PIN is only required for sending money, not receiving it. This lack of awareness often leads to financial loss.

As a result of this task, one habit I will personally change is being more cautious while handling payment requests and unknown links. I will always verify the authenticity of any request before taking action and ensure that I never share sensitive information online. This task has made me more aware and responsible in using digital platforms safely.
